

NeoCash Overview

NeoCash is a modern and secure financial technology platform designed to simplify digital payments and enhance user convenience. It consists of three main components: the NeoCash Mobile App, the NeoCash Customer Portal, and the NeoCash Admin Portal. Together, these components provide a seamless ecosystem for end-users, agents, and administrators to manage transactions, monitor activity, and offer value-added financial services.

NeoCash Mobile Application

The NeoCash mobile app allows users to perform a wide range of financial operations directly from their smartphones. It is built using the latest mobile development technologies, ensuring a smooth, secure, and user-friendly experience. With the mobile app, users can: Send and receive money instantly. Pay bills through the Esadad service. Transfer funds to and from bank accounts. Access iBuraq services for utility and government-related payments. Manage prepaid and postpaid accounts. The app incorporates advanced security measures such as biometric authentication, encrypted communication, and PIN verification to protect user data and transactions.

NeoCash Customer Portal

The NeoCash Customer Portal is a web-based interface that allows users to access their accounts from any browser. It mirrors many of the mobile app's capabilities while offering additional functionalities like detailed transaction history export, account management tools, and online customer support. This portal is especially useful for users who prefer desktop access or require advanced reporting capabilities.

NeoCash Admin Portal

The NeoCash Admin Portal is a comprehensive management interface for system administrators and financial institutions. It provides full visibility over transactions, user accounts, and service integrations. Admins can: Monitor real-time transaction activity. Manage user and agent accounts. Approve or reject high-value transactions. Configure system settings and services. Generate compliance and financial reports. The Admin Portal also integrates with regulatory monitoring tools to ensure compliance with financial authority requirements.

Esadad Service

Esadad is a bill payment service integrated into the NeoCash ecosystem. It enables users to pay a wide range of bills, including electricity, water, telecom, and government services, directly from the app or portal. The system ensures instant confirmation and real-time transaction updates, making bill payments fast, reliable, and convenient.

iBuraq Service

iBuraq is a specialized service offered through NeoCash that facilitates payments for various government and utility services. It provides a unified interface for handling obligations such as traffic fines, municipality fees, and licensing renewals, thereby reducing the need for in-person visits to government offices.

PMA Service Integration

NeoCash is fully integrated with PMA (Palestine Monetary Authority) systems to ensure compliance with national payment regulations. This integration supports secure fund transfers, anti-money laundering checks, and real-time transaction monitoring, making NeoCash a trusted platform for both users and financial authorities.

Conclusion

NeoCash is more than just a payment application—it is a comprehensive financial ecosystem. By combining mobile convenience, web-based management tools, and robust administrative oversight, NeoCash delivers a reliable, secure, and user-friendly experience. Its integration with Esadad, iBuraq, and PMA services ensures that users can manage their financial needs in one place, while meeting the highest standards of security and regulatory compliance.
